YouStudio Joomla Template comes with 48 built-in module positions. [Adding new module](#) grids is a very simple process and within few seconds you can adjust the layout to your own liking. Each module position is completely collapsible either by disabling module in module manager or by setting module size to 0 in template manager. Mainbody grid is completely flexible and can switch sides by simply adjusting default mainbody layout in template manager. Logo width and height can also be adjusted in template manager or completely disabled.
